CAR AUDIO SYSTEMS CERTIFICATION

What is Car Audio?

Car audio refers to the video or sound system which is fitted into a vehicle. From the moment radio was introduced to the public, a lot of enthusiasts decided to also adapt a domestic

audio equipment that they can use for entertainment when driving their cars. This leads to the invention of tape players that use reel-to-reel equipment, compact cassettes, 8-track cartridges and compact discs that are primarily designed for cars. The innovations in technology have also led to the invention of new audio systems that are capable of delivering better quality sounds for cars. If you want to become an expert in car audio, then you should know that this field comes with the following vital components and terms:

Stock Unit. This is a car audio system which describes the OEM application specified by a car manufacturer to be installed in a car and usually includes an aux-in, an MP3 player and a CD radio.

Head Unit. It refers to the main control device for a car audio system. Its major components include a small amplifier, radio receiver or tuner that comes with FM and AM bands and any other media devices such as a DVD player, CD player, USB flash memory, satellite radio and HD radio.

Car Speakers. The functionality of this component is identical to the design of other types of loudspeakers. These speakers come with components that **are mainly specialized for mobile environments.**

Subwoofers. This refers to that kind of loudspeaker which has a lower frequency reproduction.

Kenvision Techniks & Beam Auto Car Audio Certification Program

If you want to become a car audio expert, then you should know that
